Master of Science in Conservation Medicine

The continued emergence of new diseases from wild animals, the effects of human activities on endangered species, and the impact of climate change on biodiversity are just a few of the topics that are examined in a novel **Master of Science in Conservation Medicine** program.

We have set aside time in December 2011 and February 2012 for prospective students to visit, discuss the program, and get their questions answered by the MCM Program Director, Dr. Gretchen Kaufman, DVM. If you are unable to travel to the Grafton, MA campus, we can schedule a phone or Skype conversation.

The following dates and time periods are available:

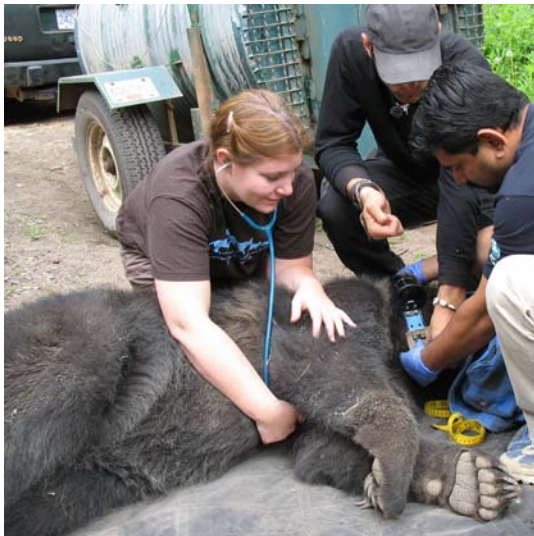

Tuesday, Dec. 6, 2011	1:00 – 5:00 pm	Tuesday, Feb. 7, 2012	1:00 – 5:00 pm
Tuesday, Dec.13, 2011	1:00 – 5:00 pm	Friday, Feb. 10, 2012	9:00 – 11:00 am and 3:00 – 5:00 pm
Wednesday, Dec. 14, 2011	1:00 – 3:00 pm	Tuesday, Feb. 14, 2012	1:00 – 5:00 pm

Please email or call Jen to schedule a visit, phone call, or Skype.

Conservation medicine focuses on health relationships occurring at the interface of humans, animals, and the environment, and seeks to develop and apply health management practices, policies and programs that sustain biodiversity and protect the ecosystems essential to animal and human health.

Since many disciplines are involved in conservation medicine, the program seeks a diversity of backgrounds, including: natural and social scientists, engineers, public health and medical professionals, veterinarians, lawyers, policy and wildlife professionals, and others interested in applying their expertise to conservation medicine issues.
